Houston Area Employment — April 2016

Total nonfarm employment in the Houston-The Woodlands-Sugar Land Metropolitan Statistical Area stood at 2,993,500 in April 2016, up 10,000, or 0.3 percent, from one year earlier, the U.S. Bureau of Labor Statistics reported today. During the same period, the national job count increased 1.9 percent. Regional Commissioner Stanley W. Suchman noted that the Houston metropolitan area has had over-the-year employment increases in each month since July 2010. (See [chart 1](#) and [table 1](#); the [Technical Note](#) at the end of this release contains metropolitan area definitions. All data in this release are not seasonally adjusted; accordingly, over-the-year analysis is used throughout.)

Chart 1. Total nonfarm employment, over-the-year percent change in the United States and the Houston metropolitan area, April 2010–April 2016

Source: U.S. Bureau of Labor Statistics.

Industry employment

Leisure and hospitality had the largest annual job gain among Houston's supersectors, adding 18,600 jobs since April 2015. The 6.2-percent local rate of job growth in this supersector was more than double the national rate of 2.9 percent. (See [table 1](#) and [chart 2](#).) The local industry's job gains were concentrated in food services and drinking places, which added 15,700 jobs during the period.

The education and health services supersector added 17,000 jobs, a 4.7-percent rise from April 2015; nationally, employment in this industry rose 3.1 percent. Local job gains for this sector were mainly in ambulatory health care services and hospitals.

Government employment expanded by 7,800 jobs over the year, with local government accounting for nearly all of the increase, up 7,000. Employment gains in local government were led by educational services, which added 6,100 jobs. In the Houston area, total government employment increased 2.0 percent compared to a 0.4-percent gain nationally.

Trade, transportation, and utilities—the area’s largest supersector—added 6,300 jobs, up 1.0 percent from April 2015 to April 2016. The area’s retail trade industry gained 10,400 jobs, an increase of 3.5 percent. Nationally, the trade, transportation, and utilities supersector expanded 1.8 percent.

Two other local supersectors had employment gains of at least 1,300 from April 2015: construction (+5,500) and financial activities (+1,300). The construction sector job gains were led by heavy and civil engineering construction, which added 5,700 jobs, an increase of 12.0 percent. Houston’s total construction sector rose 2.6 percent compared to the national gain of 4.2 percent. The financial activities sector rose 0.9 percent locally and 2.0 percent nationally.

Chart 2. Total nonfarm and industry supersector employment, over-the-year percent change, United States and the Houston metropolitan area, April 2016

Source: U.S. Bureau of Labor Statistics.

Manufacturing had the largest job loss among Houston supersectors between April 2015 and April 2016, declining 18,500. Locally, manufacturing employment fell 7.4 percent compared to a 0.2-percent decline nationally.

Two other Houston area supersectors had job losses of more than 12,500 from the previous year – mining and logging (-14,100) and professional and business services (-12,600). Local mining and logging employment fell 13.8 percent from April 2015, compared to the national decrease of 16.7 percent. Houston’s

professional and business services supersector declined 2.7 percent, in contrast to the national gain of 3.1 percent.

Employment in the 12 largest metropolitan areas

Houston was 1 of the nation's 12 largest metropolitan statistical areas in April 2016. All 12 areas experienced over-the-year job growth during the period, with 8 exceeding the national average of 1.9 percent. The fastest rate of job growth was in Dallas-Fort Worth-Arlington, up 3.9 percent. The slowest rate of job growth was in Houston (0.3 percent). (See [chart 3](#) and [table 2](#).)

Chart 3. Total nonfarm employment, over-the-year percent change, United States and 12 largest metropolitan areas, April 2016

Source: U.S. Bureau of Labor Statistics.

Since April 2015, the New York-Newark-Jersey City area added the largest number of jobs, 173,900. Employment in both Los Angeles-Long Beach-Anaheim and Dallas also increased by over 130,000. Houston experienced the smallest employment gain over the year, adding 10,000 jobs, followed by Boston-Cambridge-Nashua, up 43,900 jobs.

Professional and business services had the largest employment gains in 6 of the 12 metropolitan areas from April a year ago—Atlanta-Sandy Springs-Roswell, Miami-Fort Lauderdale-West Palm Beach, Philadelphia-Camden-Wilmington, Phoenix-Mesa-Scottsdale, San Francisco-Oakland-Hayward, and Washington-Arlington-Alexandria. Education and health services added the most jobs in three areas—Boston, Los Angeles, and New York.

Four areas experienced no annual job losses in any supersector—Atlanta, Miami, New York and Philadelphia. Manufacturing had the largest over-the-year losses in Boston, Dallas, Houston, and Los Angeles.

Metropolitan area employment data for May 2016 are scheduled to be released on Friday, June 17, 2016, at 10:00 a.m. (ET).

Technical Note

This release presents nonfarm payroll employment estimates from the Current Employment Statistics (CES) program. The CES survey is a Federal-State cooperative endeavor between State employment security agencies and the Bureau of Labor Statistics.

Definitions. Employment data refer to persons on establishment payrolls who receive pay for any part of the pay period that includes the 12th of the month. Persons are counted at their place of work rather than at their place of residence; those appearing on more than one payroll are counted on each payroll. Industries are classified on the basis of their principal activity in accordance with the 2012 version of the North American Industry Classification System.

Method of estimation. The employment data are estimated using a "link relative" technique in which a ratio (link relative) of current-month employment to that of the previous month is computed from a sample of establishments reporting for both months. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these ratios. Small-domain models are used as the official estimators for the approximately 39 percent of CES published series which have insufficient sample for direct sample-based estimates.

Annual revisions. Employment estimates are adjusted annually to a complete count of jobs, called benchmarks, derived principally from tax reports that are submitted by employers who are covered under state unemployment insurance (UI) laws. The benchmark information is used to adjust the monthly estimates between the new benchmark and the preceding one and also to establish the level of employment for the new benchmark month. Thus, the benchmarking process establishes the level of employment, and the sample is used to measure the month-to-month changes in the level for the subsequent months.

Reliability of the estimates. The estimates presented in this release are based on sample surveys, administrative data, and modeling and, thus, are subject to sampling and other types of errors. Sampling error is a measure of sampling variability—that is, variation that occurs by chance because a sample rather than the entire population is surveyed. Survey data also are subject to nonsampling errors, such as those which can be introduced into the data collection and processing operations. Estimates not directly derived from sample surveys are subject to additional errors resulting from the specific estimation processes used. The sums of individual items may not always equal the totals shown in the same tables because of rounding.

Employment estimates. Measures of sampling error are available for state CES data at the total nonfarm and supersector level and for metropolitan area CES data. Information on recent benchmark revisions for states is available on the BLS Web site at www.bls.gov/sae/.

Area definitions. The substate area data published in this release reflect standards and definitions established by the U.S. Office of Management and Budget, dated February 28, 2013. A detailed list of the geographic definitions is available at www.bls.gov/lau/lausmsa.htm.

The **Houston-The Woodlands-Sugarland Metropolitan Statistical Area** includes Austin, Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, and Waller Counties in Texas.

Additional information

More complete information on the technical procedures used to develop these estimates and additional data appear in Employment and Earnings, which is available online at www.bls.gov/opub/ee/home.htm. Industry employment data for states and metropolitan areas from the Current Employment Statistics program are also available in the above mentioned news releases and from the Internet at www.bls.gov/sae/.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
